

Step 1 (optional):

Use scissors to cut the edges of your egg carton pieces so they line up better when closed.

Step 2:

Mix food coloring into your salt. Paint could also be used, but it will not have the same crystal effect as food coloring.

Step 3:

Line the inside of the egg carton with glue. Make sure you cover the entire inside so the salt sticks.

Step 4:

Pour the salt mixture into your egg carton. You may need to rotate the egg carton to make sure the salt reaches all of the glue. Pour out any extra.

Step 5:

Repeat with the second piece of egg carton. Wait for it to dry and then it's ready to go! An optional final step is to seal it with mod podge or other clear spray to prevent some of the salt from falling out.
